# Diamond Blades

# Product Guarantees & Safety

The concept of safety is fundamental to the philosophy of the OX range. It is interwoven into the very fiber of innovation, design and production from concept to after sales service.

**EN 13236**  
*Blades conform to USA, European and Australian standards.*

**Full 'No Hassle' Guarantee**  
*All OX products are backed by our full 'No hassle' guarantee – Ensuring confidence of distributors and their customers.*

**Diamond Innovation**  
*Ongoing development provides increased performance on existing products and innovative new diamond solutions.*

**Safety**  
*Products undergo rigorous safety and vibration testing at our research & development facility, and in the field.*

**Professional Builders Award**  
*Professional builders coveted 'Top Product' Award was won by the OX-PU10 PROFESSIONAL diamond blade in 2006.*

**Ultimate Guarantee**  
*Ultimate products undergo extreme testing – the OX-PU10 undergoes factory testing +80% more demanding than the requirements of EN13236.*

**Hand/Arm Vibration**  
*OX products were among the first to be tested and certified safe for hand/arm vibration.*

**Extra Safe**  
*Our safety policy is an integral part of our company ethos with policies incorporating ISO18001.*

**Staff**  
*Staff safety and care is no afterthought. Our personal and individual approach is reflected in our attitude to customers and staff alike.*

**Environmental**  
*Showing that we care: Manufacturing operations accredited to ISO 14001 environmental systems.*

We have a responsibility. Quality control systems and environmental and safety management ensure that our care covers not only our products and our customers – but that our ethical guidelines address issues such as staff safety and care for the environment.

## World leading technology...

Only the finest quality of diamond is used in the production of OX products

State of the art laser technology for ultimate performance and safety

Blade cores are made of the highest quality steel, precision engineered, ground and hardened

## What is 'wave' technology?

OX Tools developed the UU10 ULTIMATE UNIVERSAL DIAMOND BLADE with WAVE Technology to tackle the toughest materials on the jobsite. We LIVE THE TRADE and work closely with contractors to prove our technology.

We are committed to increasing productivity which in turns makes you more money. The WAVE technology increases the speed of cut, increases the life of the blade, reduces vibration and makes the cutting experience better!

# Blade Selection & Presentation

## **CONTRACTOR SERIES**

Gets the job done, even for those with smaller budgets.

## CONTRACTOR SERIES

The CONTRACTOR range is for blade users who are the most cost conscious, while still wanting a product that will meet their needs. Despite its low cost, these blades are designed to provide strong performance for the price and remain at a safety standard suitable for any contractor. The longevity and performance of the DU10 has surprised many who have bought blades in a similar price range.

## ULTIMATE SERIES

When we set out to create the ultimate range, the brief was that these blades needed to be better than anything else available on the market for performance, presentation and value. We believe we have excelled ourselves.

The Ultimate range stands apart from the crowd. It is a range of its own and has its own packaging, brochure and stands. Backed by every safety standard including EN13236 Guaranteed safe. Guaranteed to perform.

# INTRODUCING... ULTIMATE TURBO DIAMOND BLADE

BUILT FOR SPEED. CUTS ALL... GUARANTEED!

## ULTIMATE TURBO BLADE

100x stronger than  
hot pressed sintered  
blades

Ultra-hard cutting  
segments made  
from a blend of  
tungsten and  
diamonds for longer  
life.

Balanced steel  
core design

Cooling  
holes  
to avoid  
overheating

Perfectly  
balanced for a  
straight, true  
and clean cut.

## ULTIMATE TURBO UNIVERSAL MATERIAL BLADE

Extra long life, up to 65 times more life than conventional abrasives!. Ultra Thin Kerf  
Cuts extremely fast!. Strong Steel Core -Does not shrink, safer with a consistent  
cutting depth!. Generates much less debris and sparks than abrasive wheel.

Product code	UPC Code	Diameter(in)	Bore(in)	List Price

## Metalworking Blades & Wheel

### ULTIMATE METAL CUTTING VACUUM BRAZED DIAMOND BLADE

Extra long life, up to 65 times more life than conventional abrasives!. Ultra Thin Kerf Cuts extremely fast!. Strong Steel Core -Does not shrink, safer with a consistent cutting depth!. Generates much less debris and sparks than abrasive wheel.

Product code	UPC Code	Diameter(in)	Bore(in)	List Price
OX-UMC-4.5	9341231019098	4.5	5/8" - 7/8"	\$27.99
OX-UMC-7	9341231019111	7	5/8" - 7/8"	\$58.99
OX-UMC-9	9341231019128	9	5/8" - 7/8"	\$116.99
OX-UMC-12	9341231019135	12	5/8" - 7/8"	\$159.99
OX-UMC-14	9341231030895	14	5/8" - 7/8"	\$183.99

### ULTIMATE USB SUPER ABRASIVE BLADE

Vacuum brazed center plate for side clearance and protection. heat-resistant, precision balanced diamond blade. Keeps a constant depth of cut compared to conventional abrasive blades. Suitable for angle grinders. Applications: Ductile Iron Pipe, cast iron, rebar, steel, fiberglass, plastic pipe, concrete and handheld saws

Product code	UPC Code	Diameter(in)	Bore(in)	List Price
OX-USB-4	9341231024238	4	5/8" - 7/8"	\$41.75
OX-USB-7	9341231024276	7	5/8" - 7/8"	\$101.99
OX-USB-9	9341231024283	9	5/8" - 7/8"	\$116.99
OX-USB-14	9341231024306	14	1 - 20"mm	\$209.99

### ULTIMATE METAL CUTTING GRINDER WHEEL

Removes material 20% Faster. Last much Longer. No carbon dust hazard. Less Sparking. Does not chip or shrink. Less switching, less downtime. More productive

Product code	UPC Code	Diameter(in)	Bore(in)	List Price
OX-UMCG-4.5	9341231018749	4.5	5/8" - 7/8"	\$125.99

## Wood Cutting Blades

**BLADE PROFILE: TCTW24**

- Framing
- Ripping
- General Wood Cross
- Cutting – Plywood
- Hardwoods
- Framing materials

## PRO WOOD CUTTING TOOTH COATED SAW BLADE

- Electro coated blades for extreme durability, reduction of heat, and smooth cutting performance
- Laser cut vibration and noise reducing slots
- 24 carbide tipped teeth for long lasting cutting performance
- Thin kerf design for quicker cutting
- Designed for framing, ripping, and general wood cross cutting-plywood, hardwoods, framing materials
- 5/8" diamond arbor
- Max 10,000 RPMs

Product code	UPC Code	Diameter(in)	Bore(in)	List Price
OX-TCTW24-7.25	9341231018848	7.5	5/8	\$11.99

## ULTIMATE UKB KARBITE - MULTI-PURPOSE CARBIDE BLADE

Can Cut In Either Direction. Carbide Clusters. Bi-Directional - Does Not Need To Be Sharpened. Reduced Noise And Vibration. Applications: Multi-Purpose - Wood, Metal, Rubber, Plastic, Abrasive Blocks

Product code	UPC Code	Diameter(in)	Bore(in)	List Price
OX-UKB-4.5	9341231005138	4.5	1 - 20"mm	\$70.99
OX-UKB-9	9341231005152	9	1 - 20"mm	\$192.99
OX-UKB-14	9341231012501	14	1 - 20"mm	\$283.99

## CUP GRINDER / WHEELS

### TRADE TURBO SEGMENT CUP WHEEL

Ultimate double row cup grinder for universal concrete, construction products and stone. Long life. - Applications include: concrete, natural stone and construction products.

Product code	UPC Code	Diameter(in)	Bore(in)	List Price
OX-TCTB-4	9341231044854	4	7/8 - 5/8	\$26.99
OX-TCTB-4.5	9341231044724	4.5	7/8 - 5/8	\$30.99
OX-TCTB-5	9341231044861	5	DM-7/8-5/8	\$62.99
OX-TCTB-7	9341231044878	7	DM-7/8-5/8	\$199.99

### PRO EPOXY REMOVER CUP WHEEL

Ultimate double row cup grinder for universal concrete, construction products and stone. Long life. Applications include: concrete, natural stone and construction products.

Product code	UPC Code	Diameter(in)	Bore(in)	List Price
OX-PCD6-5	9341231018428	5	7/8 (6 segments)	\$119.99
OX-PCD8-5	9341231018435	5	7/8 (12 segments)	\$139.99

### ULTIMATE UCDDT & UCDDTA DOUBLE ROW CUP GRINDER

Ultimate double row cup grinder for universal concrete, construction products and stone. Long life. Applications include: concrete, natural stone and construction products.

Product code	UPC Code	Diameter(in)	Bore(in)	List Price
OX-UCDDT-4	9341231004933	4	7/8 - 5/8	\$59.99
OX-UCDDT-4.5	9341231004957	4½	7/8 - 5/8	\$64.99
OX-UCDDT-5	9341231004971	5	7/8 - 5/8	\$69.99
OX-UCDDT-7	9341231005015	7	7/8 - 5/8	\$99.99
OX-UCDDTA-4	9341231004858	4	( 5/8 - 11 Thread) (4 places)	\$59.99
OX-UCDDTA-4.5	9341231030000	4½	( 5/8 - 11 Thread) (4 places)	\$64.99
OX-UCDDTA-5	5060242336416	5	( 5/8 - 11 Thread) (4 places)	\$69.99
OX-UCDDTA-7	5060242335525	7	( 5/8 - 11 Thread) (4 places)	\$99.99

### ULTIMATE SPIRAL CUP GRINDER

Ultimate spiral cup grinder for universal concrete construction products and stones. Applications include: natural stone and construction products.

Product code	UPC Code	Diameter(in)	Bore(in)	List Price
OX-UPSC18-4	9341231019876	4	7/8 - 5/8 (18 segments)	\$59.99
OX-UPSC18-5	9341231019890	5	7/8 - 5/8 (18 segments)	\$69.99
OX-UPSC24-7	9341231019913	7	7/8 - 5/8 (24 segments)	\$99.99
OX-UPSCA18-4	9341231019883	4	(5/8 - 11 Thread) (18 segments)	\$59.99
OX-UPSCA18-5	9341231019906	5	(5/8 - 11 Thread) (18 segments)	\$69.99
OX-UPSCA24-7	9341231019920	7	(5/8 - 11 Thread) (24 segments)	\$99.99

## STONE POLISHING PADS

### ULTIMATE DRY POLISHING PADS

Dry premium polishing pads. Hexagon type.  
Applications: All natural stone.

Product code	UPC Code	Diameter(in)	Bore(in)	List Price
OX-DPPS8-4	5060359913777	4	50 / 100 / 200 / 400 / 800 / 1500 / 3000	\$262.99

### ULTIMATE BACKER PAD POLISHING PADS

Flexible backer pad. For use with all wet and dry polishing pads.

Product code	UPC Code	Diameter(in)	Bore(in)	List Price
OX-DPPBP-4	5060359913852	4	5/8 - 11	\$36.99

## TUCK POINTING/MORTAR RAKING BLADES

### TRADE TMR TUCK POINTING

¼" wide segment blade. Fantastic value for money product.  
Applications include: mortar raking, brick raking, abrasive materials.

Product code	UPC Code	Diameter(in)	Bore(in)	List Price
OX-TMR-4	9341231012419	4	7/8 - 5/8	\$25.99
OX-TMR-4.5	9341231003981	4½	7/8 - 5/8	\$26.99
OX-TMR-5	9341231003998	5	7/8 - 5/8	\$30.99
OX-TMR-7	9341231004001	7	DM-7/8-5/8	\$62.99
OX-TMR-14	9341231019838	14	DM-7/8-5/8	\$199.99

### PRO PDTP SANDWICH DOUBLE TUCK POINTING

¼" Wide blade – Faster cutting and longer life. For use on an angle grinder.  
Applications include: tuck pointing, masonry, concrete.

Product code	UPC Code	Diameter(in)	Bore(in)	List Price
OX-PDTP-4.5	5060242336447	4½	7/8 - 5/8	\$30.99
OX-PDTP-5	5060242336454	5	7/8 - 5/8	\$36.99

### PRO PTP SANDWICH DOUBLE TURBO TUCK POINTING

¼" Wide blade – Faster cutting and longer life. For use on an angle grinder.  
Applications include: tuck pointing, masonry, concrete.

Product code	UPC Code	Diameter(in)	Bore(in)	List Price
OX-PTTP-4.5	5060242336485	4½	7/8 - 5/8	\$60.99
OX-PTTP-5	5060242336492	5	7/8 - 5/8	\$69.99

### PRO PCTP SUPERFAST SANDWICH TUCK POINTING

¼" Wide blade. For use on an angle grinder. Turbo segment for extremely fast cut.  
12mm segment for long life. Applications include: tuck pointing, masonry, concrete.

Product code	UPC Code	Diameter(in)	Bore(in)	List Price
OX-PCTP-4.5	9341231006784	4½	7/8 - 5/8	\$34.99
OX-PCTP-5	9341231006791	5	7/8 - 5/8	\$40.99

## TRIPLE STACK SANDWICH BLADE

### PRO TRIPLE TUCK POINTING BLADE

3 premium blades stacked and staggered for an aggressive performance and designed to efficiently remove thicker joints at a fast speed.

## PRO PTS TRIPLE SANDWICH TUCK POINTING BLADE

Triple Sandwich Tuck Point Blade; Dry / Wet Use

Applications : Concrete and Mortar Joint Removal; Use with Angle Grinder, Circular Saw, Tuck Pointer

Product code	UPC Code	Diameter(in)	Bore(in)	List Price
OX-PTS3-4.5	9341231019470	4.5	7/8" - 5/8"	\$63.99
OX-PTS3-5	9341231019487	5	7/8" - 5/8"	\$79.99

## GREEN ENTRY BLADE

### EARLY ENTRY CONCRETE BLADES

- With Skid Plate
- Triangle Arbor

## PRO EARLY ENTRY BLADE

Product code	UPC Code	Diameter(in)	Bore(in)	List Price
OX-EEB-6	9341231039355	6"	-	\$124.99
OX-EEB-8	9341231039362	8"	-	\$164.99

OX-UCCT-7	9341231019791	7	5/8" – 11 Thread	.375	\$150.99

The professional choice for the professional contractor. UWCB wet concrete drills have been tested and proven in the most demanding aggregates in the world.

## ULTIMATE WET CORE BITS

- Turbo Segment
- Quick cutting
- Longer life.
- 18" Usable Core reduces need for extenders

## ULTIMATE WET CORE BITS

Drilling in concrete with medium to hard aggregates and medium to heavy reinforced steel concrete and brick.

Tiling is a big thing in today's world, and the last few years have seen a massive increase in the use of natural stone and man-made ceramics in commercial and domestic situations. For cutting ceramics, a smooth continuous rim diamond blade is used to give a fine clean cut – where a segmented blade could cause chipping. Our ceramic tile cutting blades are available in the STANDARD and PRO ranges” Take out this statement since the Pro and Standard are discontinued.

## TILING BLADE PROFILE: UCT

### ULTIMATE UCT – CUTS ALL TILES – GUARANTEED!

Featuring 10mm continuous rim, fine cut, high concentration, s-slot cool cutting, s-detenso silencing. Cuts all tiles – guaranteed! Applications include: ceramic tiles, natural stone, porcelain, granite, marble.

# Checking the accuracy of a level

Checking the accuracy of a level is easy. When you are purchasing a level or think that your level may have been damaged on the worksite, you can check its integrity with the following simple steps.

## To check the horizontal vial:

1. Place the level on a flat surface.
2. Make two marks:
  - At the end of the level – **End Mark**.
  - Along the body of the level in line with the horizontal vial - **Test Point**.
1. Read the vial and remember the bubble's position.
2. Turn the level around 180° from end to end and set side of the level back on the test surface. Be sure to line up the vial with the **Test Point**.
3. Take your second reading.

**NOTE:** The bubble in an accurate level will give you the same reading both times. Any difference in the bubble's position is the degree of inaccuracy in the level.

4. Repeat the test even if the readings indicated an accurate level.

## To check the vertical vial:

1. Place the level against a plumb doorframe or flat wall.
2. Make two marks:
  - At the end of the level – **End Mark**.
  - Along the body of the level in line with the vertical vial – **Test Point**.
3. Read the vial and remember the bubble's position.
4. Turn the level from side to side (not end to end) and place it back on the wall. Be sure to line up the vial with your **Test Point**.
5. Take your second reading.

**NOTE:** The bubble in an accurate level will give you the same reading both times. Any difference in the bubble's position is the degree of inaccuracy in the level.

6. Repeat the test even if the readings indicated an accurate level.

End Mark

Test Point

Turn the level 180° side to side

Align the vial with End Mark and Test Point

End Mark

Test Point

Turn the level 180° side to side

Align the vial with End Mark and Test Point

## PRO XL HYDRO SPONGE

### FEATURES

- Premium quality hydrophilated polyester foam has tremendous water holding capacity
- Professional extra large sponge for grouting and general clean up
- Rounded edges minimize digging into grout

Product code	UPC Code	Size	Packaging	Inner Qty	Outer Qty	List Price	
OX-P140902	5060359912985	7 <sup>3</sup> / <sub>8</sub> " x 5 <sup>1</sup> / <sub>4</sub> " x 2 <sup>1</sup> / <sub>4</sub> "		100	25	100	\$3.49

# Merchandising and Promotional

Customized OX planograms available to fit your store. Call your dedicated regional account manager for pricing and additional information.

## WALL DISPLAY STAND

### FEATURES

- Heavy duty metal pegboard
- Modular - can be connected to create a display wall
- 40½" W x 21" D footprint
- 88" - 96" H (adjustable header)

Product code	UPC Code	Qty of hooks	Inner Qty	Outer Qty	List Price
OXPOS-TOOL1-4FTA	9341231019814	60	1	1	\$495
OXPOS-TOOL1-4FTB	9341231045073	60	1	1	\$495

## ROLLING DISPLAY STAND

### FEATURES

- Display with lockable castors
- Built-in storage with lockable door
- Only takes 4.7 sq ft of floor spac
- Holds approximately 35-55 sku's
- 26 x 26 x 70 in (L x W x H)

Product code	UPC Code	Qty of hooks	Inner Qty	Outer Qty	List Price
ME-DSM04A	9341231035708	-	1	1	\$500
ME-DSM04B	9341231037986	-	1	1	\$500

## LEVEL DISPLAY STAND

### FEATURES

- Steel construction
- 12 level capacity - 11 x 14 x 18 in (L x W x H)

Product code	UPC Code	Capacity	Inner Qty	Outer Qty	List Price
OXPOS-LEVEL1	9341231035463	12 Levels	1	1	\$89.99

## 4FT X 4FT LOW WALL DISPLAY STAND

### FEATURES

- Heavy duty metal pegboard
- Modular - can be connected to create a wall display
- 48 x 21 x 48 (L x W x H)
- Adjustable header

Product code	UPC Code	Qty of hooks	Inner Qty	Outer Qty	List Price
OXPOS-TOOL3	9341231050213	-	1	1	\$300

## MULTI-USE COUNTER BOX

### FEATURES

- Solid cardboard construction
- Ideal for displaying small components & monthly specials

Product code	UPC Code	Size	Inner Qty	Outer Qty	List Price
OX-DS452010	9341231015892	10"w x 12"d	-	1	\$4.99

## HYDRO SPONGE DUMP BIN

### FEATURES

- Corrugated cardboard construction
- Holds up to 225 sponges - 24 x 24 x 48 in (L x W x H)

Product code	UPC Code	Inner Qty	Outer Qty	List Price
OX-DS451901	9341231015885	1	1	\$22.99

## BRIM BASEBALL CAP

### FEATURES

- Six panel
- Cotton Twill Cap
- One size fits all elastic internal fit

Product code	UPC Code	Colors	Inner Qty	Outer Qty	List Price
OXPOS-CAP02	9341231035036	Cyan - one size fit all	12	144	\$16.99
OXPOS-CAP03	9341231038228	Black - one size fit all	12	144	\$16.99

## SINGLE METAL PEG BOARD HOOK, 3/16" THICK

Product code	UPC Code	Length (mm)	Inner Qty	Outer Qty	List Price
OX-D452606	9341231016509	6"	NA	100	\$2.99

# Diamond Blade Trouble Shooting Guide

# How to choose the right diamond blade?

## 1. The Price

Which is the most important factor to you? The initial price of the blade or the price per cut? For smaller jobs, or occasional use, a low priced blade of our Trade quality may be preferable. For larger jobs, or regular use, a higher priced blade will actually be less expensive to use because it will deliver the lowest cost per cut. We recommend Professional quality or Ultimate quality. For really big jobs, the lowest possible cost per foot is usually much more important than the initial price. You may choose Professional or Ultimate quality. OX has a grading system to help you identify the different performance level of blades.

## 2. The type and horsepower of saw

What kind of saw or grinder is being used? What is the horsepower? What is the RPM? masonry saw, concrete saw, high speed saw, small power hand saw, angle grinder, floor grinder? Blades should be matched with the saw and horsepower for best results from blade and saw. Diamond blade manufacturers design products to be run at specific speeds. Blades that are to be used on high speed cut-off saws have to be rated at higher RPMs. All OX handheld saw blades are rated at the appropriate, higher RPMs.

## 3. The material to be cut

Correctly identifying the material you're going to cut is the most important factor in choosing a blade. It directly affects the cutting speed and life of the blade. Most materials will fall into the following categories: hard, medium hard, medium soft, soft. For example in masonry, hard would be granite or quarry tile. In concrete it would be cured concrete with hard aggregate. Soft would be light weight block or asphalt. When cutting hard materials, choose a softer matrix. The softer bond will release the diamond chips at the point of maximum utilisation without the danger of holding the diamond long enough to be exposed to heat at the cutting point. If the overexposed diamond is not sloughed off in time, it will glaze over and stop cutting. The glazed-over surface will stop the entire sloughing off process and the blade will stop cutting because there are no new diamond chips being exposed at the cutting edge. The diamond blade will be useless even though the segment has not been completely utilized. When cutting soft materials, select a harder matrix that will hold the diamond chips longer so they can be more productive. If you use a soft bond with soft concrete, the bonding matrix will release the diamond chips before they have reached maximum utilisation and good diamond cutting chips will be lost prematurely. The blade will still cut adequately but productivity will be poor. You have to consider the amount and size of steel reinforcing. Blades have low efficiency in cutting steel bar.

Most diamond blades cut a RANGE of materials for maximum performance of cutting and life. The material should be matched to the blade as closely as possible. As a general rule, determine the material which will be cut most often, or the material for which blade performance is most important.

## 4. Wet or dry cutting

Choosing wet or dry cutting may be a matter of user preference or job requirement. When using an electric hand tool such as an angle grinder, it is not safe to use water because of the electrical power source. For concrete saws wet cutting is usually preferred because you can cut deeper when using water as a coolant. For tile and masonry saws, either wet or dry cutting can be used. For high speed hand held petrol saws, dry blades are more popular, but they are often used wet to control dust. Wet blades MUST be used with water. Dry blades may be used either dry or wet as the job or equipment allows.

## 5. The importance of segment height

Total segment heights may be misleading because of non-diamond bearing segment bases necessary for the laser welding or sintering process. But the higher segment last longer. If you want to save on the total cost for larger jobs you would choose longer segment height. You can choose proper segment height according to the job size.

## 6. Variables affect performance

Many other factors affect the blade's performance and consequent value. Consider the diamond size, concentration and quality, the hardness of the bond, the cutting power of the saw, and how well the blade spec is matched to the material being cut.

# This is how a diamond blade works

## What is a diamond blade?

A diamond blade is composed of two fundamental elements: a steel plate and a diamond-impregnated segment. The latter may have a number of appearances: the segmented rim, the continuous rim, the castellated rim, or the integral segment, which means that the segment is fully integrated into the core blade.

Segmented rim

Turbo segmented rim

Semi continuous rim

Continuous rim

The steel plate is of very high quality, treated, hardened steel. Slots separate the segments which contribute to the cooling of the blade during sawing by allowing the water (wet cutting) or the air (dry cutting) to flow between the segments. They also allow the blade a certain amount of flexibility during cutting. The segments contain a mixture of diamonds and metal powder. During the manufacturing process, the metal powder and diamond mixture is compressed at a very high temperature in order to obtain a solid metal alloy which holds the diamonds. The segment or rim is slightly wider than the steel blade to allow the attacking edge to penetrate the material without the steel blade rubbing against it.

In a diamond tool properly suited to the material to be cut, the equilibrium between the work of the diamond and the abrasion-resistance of the bond is optimum; the diamond is held in place until it is destroyed and new crystals appear.

It is in this equilibrium that all the quality of the diamond tool resides. A blade intended for cutting hard, dense (less abrasive) materials requires a softer metal matrix. This wears out more rapidly, by replacing the worn diamonds relatively quickly so that the blade continues to cut. A blade intended for cutting soft, abrasive materials must have a hard, abrasion-resistant blade in order to retain the diamonds longer.

# This is how a diamond blade works

## How does a diamond blade work?

A diamond blade does not cut but works by milling. During the sharpening process performed at the factory, individual diamond crystals are exposed on the face and sides of the segment and it is these that do the milling work. The metal matrix holds each diamond in place. During the work, each diamond is supported by a comet's tail which strengthens the supporting action of the bond immediately "behind" the diamond crystals.

The diamonds exposed in this way cut into the material reducing it to fine powder.

During cutting, the exposed diamonds may crack or break (all the more rapidly, the harder and denser the material)

Simultaneously, the material starts to wear out the metal matrix in the segments by abrasion, which allows the gradual release of new diamonds.

### The Price

Determine what is most important to you: the purchase price of the tool or the cost per cut. For less important jobs or for occasional use, a cheaper tool may be the right choice. For more important jobs or for regular use, a more expensive tool with a low cost per cut (per square meter) is preferable as it provides better results and performance.

### Material to be cut

The correct identification of the material you are going to cut is the most important factor when choosing a tool. The material has a direct influence on the cutting speed and the service life of the tool. Throughout the catalog you will find tables explaining the various applications of the diamond tools; these should help you choose the most appropriate tool for your work.

### Dry or wet cutting?

This choice may depend on the user's preference or on some particular constraint associated with the work to be done. For concrete saws, wet cutting is preferable as it allows deeper cuts and prolongs the service life of the blade. For tile and masonry saws, dry- or wet-cutting tools may be used equally well. For general purpose site saws, dry-cutting tools are most frequently used. Wet cutting is used primarily to limit the amount of dust. If you experience problems with wobbling when using a high-power handheld machine cutting dry, try wet cutting. This will cool down the blade and solve the problem. Some diamond blades and drill bits, must be used together with water. Dry-cutting tools may be used with or without water, depending on the machine and the material to be cut.

# A guide to diamond blades

## Introduction

Specialist tools such as the OX product range require a similarly specialist support service. Our far ranging experience encompasses thousands of diamond tools and our qualified staff can assist your selection from our comprehensive product list to reach rapid solutions to your specific application problems.

This booklet has been designed to assist in the careful use of our diamond blades so as to ensure their longevity and safety of use.

## OX recommendations of speeds

### DRY CUTTING

Ø	RPM	maximum peripheral m/Sec
105mm / 4"	15300	80
115mm / 4.5"	13300	80
125mm / 5"	12300	80
150mm / 6"	10200	80
180mm / 7"	8500	80
205mm / 8"	7650	80
230mm / 9"	6650	80
300mm / 12"	6360	100
350mm / 14"	5450	100
450mm / 18"	3400	80

### FOR USE ON FLOOR MACHINERY – WET CUTTING

Ø	RPM	maximum peripheral m/Sec
350mm / 14"	2450	45
450mm / 18"	1900	45
600mm / 24"	1440	45

## Operating Instructions

### Important

Before using your OX diamond blade, please read these instructions carefully and ensure they are observed.

1. Check the center bore diameter of the blade corresponds to the spindle diameter of the machine.
2. Check for wear of the blade flanges and machine spindle. Worn parts must be changed before remounting a blade.
3. Mount the blade carefully, ensuring it is correctly positioned and seated on the spindle. Securely tighten the flanges with the fixing bolt or nut.
4. Rotate the blade by hand to check it is running concentric and does not foul any guarding.
5. If the initial cutting is on hard dense materials such as quarry tiles, engineering bricks, etc., predressing the blade will help to produce and maintain a good cutting speed. This is done by making several shallow cuts on a coarse abrasive material such as sandstone. On most materials the cutting speed will remain constant throughout the life of the blade. If however, the cutting speed slows appreciably, redressing will restore it.
6. Tilting or twisting of the saw should be avoided during the cutting operation as this will exert pressure and stress on the steel center. Stress and side pressure can cause damage to the steel center and segments.
7. Overfeeding is when attempts are made to force the blade to penetrate faster than it will naturally accept. Overfeeding causes rapid heat generation which in turn has a major adverse effect on the diamond segments. Over-heating and therefore overfeeding must be avoided.
8. Blades up to 300mm diameter are primarily designed for dry cutting but can also be used wet. They will penetrate steel reinforcing embedded in concrete but are not suitable for cutting bare metals of any kind.
9. If any problems are encountered, your supplier should be contacted immediately.

# A guide to diamond blades

## Receipt, handling & storage of diamond blades

**Before mounting or use, each item should be individually examined to see if it has any sign of damage or defect. Any damaged items, or any giving rise to doubt, should not be used.**

### **Handling**

Any sudden shock loading – such as dropping, spanner slip during mounting and similar events – may cause damage which is difficult to detect. All items should be carefully examined and if any doubt exists, they should not be used. Large or heavy saws should not be rolled on their periphery.

### **Storage**

OX diamond products are expensive and valuable and for this reason, in addition to safety requirements, all wheels should be stored in the packing in which they are supplied or in suitable racks, bins or compartmented drawers.

### **Mounting**

The person who mounts diamond products on to the machine should be a trained and competent person. Such products should only be mounted on the machine for which they are intended. The wheel should fit freely on the spindle and should not require force to mount it on the spindle. Wheels, saws, backplates and flanges must be free from burrs and foreign matter, and must run free in all true respects.

### **Bushings**

These should be sufficient width in relation to blade width and flange recess depth to prevent the possibility of them becoming detached from the effective part of the bore. Blade fitted with bushings must not have the bush projecting beyond the side of the blade. Flanges must clamp on the blade hub and not on the bush. BLOTTERS should not be used on metal blades.

### **Flanges**

All flange surfaces which come into contact with the blade must be true and free from burrs and foreign matter. Where two flanges are used (the rear flange being fixed to the machine spindle) they must be of equal diameter, have equal bearing surfaces properly recessed or under-cut. Where single flanges are used in conjunction with securing bolts or devices, the flange must be flat and not recessed, with the surface bearing on to the blade and fixed to the machine spindle. Clamping nuts should be tightened sufficiently to hold the blade securely but not excessively to cause damage to the blade.

CAUTION: a newly mounted blade and a blade being re-mounted should run free for a short time before it is used and everyone should stand clear. The working or cutting surface of the blade must run true. To make sure, with the power switched off, turn the blade by hand, using a dial test indicator, or similar instrument.

## Protection devices

### **Safety guards**

These serve two purposes: firstly to avoid as far as possible operators coming into contact with a rotating blade, saw etc., and secondly, to contain the blade fragments should it burst or portions become detached. A blade should always be used with a guard secured in position and properly adjusted.

### **Safety goggles**

As the cutting operation causes flying particles, eye protection is of the utmost importance. Therefore YOU MUST wear goggles when using any sawing machine. Goggles should be approved to BSEN166 Grade 1.

### **Protective clothing**

Protective clothing – safety aprons, gloves, gauntlets or face masks – should be worn as required by the nature of the cutting operation. Well-designed protective clothing will allow the operator to work more efficiently and safely.

### **Operating precautions – Training of operators**

Machine operators should be trained in the safe use of cutting machines and blades.

### **Dust extraction**

To prevent excessive dust whilst diamond cutting, dust exhaust systems are now available at attach to the angle grinder. These systems are designed to ensure that the maximum level of dust in the atmosphere does not exceed the recommended limits.

# Diamond Blade Troubleshooting Guide

## CAUSES

1. Using the wrong blade on a specific material. A blade specifically designed and manufactured for cutting tiles will wear out extremely fast if used on highly-abrasive material such as block.
2. Inadequate water is supplied to the blade.
3. Bad spindle bearings, worm mounting arbor, or misaligned shaft.
4. Loss of power, resulting from loose drive belts or improper voltage.

## REMEDIES

1. Avoid using general purpose specifications for cutting a single specific material. General purpose diamond blades are designed to cut a wide range of materials. Since it is unlikely an operator will be cutting an equal amount of both hard and soft materials at all times, this is not the most economical method of cutting.
2. Make sure water hoses are clean and free from any blockages. Approximately nine liters of water per minute are required to properly cool a masonry saw blade. On concrete saws, 9-22 liters per minute are required.
3. Replace defective parts.
4. See machine manual for proper belt tightening, replace worn belts, make sure proper line voltage is being supplied to the motor.

1. Blade retainer on some makes of saws have a 'cupped' shape allowing the reducer ring to offset. Even just a slight offset causes increasing wobble as the RPM's increase.
2. Shaft bearings are worn.
3. Blade is too hard for material being cut.
4. Blade has become dull as a result of being used on too hard a material.
5. Blade does not cut material it was specified for.
6. Insufficient power, not allowing blade to cut properly. Often, the blade will stall in the cut.

1. Repair the saw.
2. Select the proper blade specification for the material being cut. Consult blade recommendation chart.
3. Dress or sharpen with mortar droppings or by cutting a lightweight abrasive building block to expose diamonds. If continual dressing is required, the blade specification is too hard for the material being cut.
4. First, make sure the blade is correct according to the blade recommendation chart. If the blade is correct, allow it to dress itself on the material to be cut. If it does not dress itself, sharpen it as you would a dull blade, according to the procedure described above.
5. Tighten belts in accordance with machine maintenance instructions. Use correct voltage at motor and adequate horsepower for cutting application.

# Diamond Blade Troubleshooting Guide

SEGMENT LOSS

## CAUSES

1. On masonry saws, the material is not held firmly, which causes the blade to twist or jam in the cut and loosen the segment.
2. Overheating is due to inadequate supply of water or complete loss of water. This is usually accompanied by discolorations which appear on the steel center near the area of segment loss.
3. Steel center is worn thin as a result of undercutting by abrasive fines generated during cutting. The steel center (blank) wears to a knife edge, weakens and causes a segment to be separated.
4. Defective blade collars cause the blade to flutter in the cut or fail to adequately support the blade in perfect alignment.
5. Blade is too hard for material being cut, causing excessive dullness and segment separation due to impact or fatigue. This can also cause frictional heat that can melt the braze when insufficient water is supplied to the blade.
6. Blade is cutting out of round resulting in a pounding impact.
7. Improper blade tension causes high pressure on the segments and subsequent failure of the brazed joint.

## REMEDIES

1. Hold the material firmly against the backstop.
2. Provide adequate water flow to both sides of the blade. Look for line blockages. On concrete saws, temporary complete loss of water can result from equipment running over the water feed hoses.
3. Use sufficient water to flush fines out of the cut. If generated fines are highly abrasive, blades with undercut protection.
4. Clean foreign material from the blade clamping disc surfaces, or replace clamping discs if they are under manufacturer's recommended diameter.
5. Use the proper blade specifications for the material being cut.
6. Replace worn bearing, realign blade shaft, or replace worn spindle.
7. Make sure the running speed of equipment is specified when ordering blades. On concrete saws, the spindle speed should be checked with a tachometer to ensure that each diameter blade is running at the recommended cutting speed and blade-tensioned speed.

DISTORTED CENTER STEEL

1. Inadequate tightening of the blade on concrete saw mounting shaft. This causes drive pin to force its way through blade blank.
2. Dropping saw head with mounted blade particularly on concrete saws. Also dropping objects on unmounted blade distorts blade blanks.

1. Tighten clamping nut securely.
2. Avoid dropping the blade. Protect blade from abuse and handle with care.

## Diamond Blade Troubleshooting Guide

	CAUSES	REMEDIES
 <p>UNEVEN SEGMENT</p>	<ol style="list-style-type: none"><li>1. Insufficient water, generally to one side of the blade, reduces side clearance and does not flush out fines.</li><li>2. Equipment defects cause the segment to wear unevenly.</li><li>3. Saw head is misaligned.</li></ol>	<ol style="list-style-type: none"><li>1. Flush out the water system. Make certain that water is adequately and evenly distributed to both side of the blade.</li><li>2. Replace bad bearings, worn or misaligned spindle. On concrete saws, the engine must run smoothly to prevent harmonic vibrations which cause the blade to pound on a regular cycle basis.</li><li>3. Check saw head alignment for squareness both vertically and horizontally.</li></ol>
 <p>CRACKS IN SEGMENT</p>	<ol style="list-style-type: none"><li>1. The blade is too hard for the material being cut.</li></ol>	<ol style="list-style-type: none"><li>1. Use blade with a softer bond.</li></ol>
 <p>CRACKS IN STEEL CENTER</p>	<ol style="list-style-type: none"><li>1. Blade flutters in a cut as a result</li><li>2. Blade specification is too hard for material being cut.</li><li>3. Forcing blade in operation.</li><li>4. Twisting blade in cut.</li></ol>	<ol style="list-style-type: none"><li>1. Tighten the blade clamping disc nut. Be sure that the blade is running at the properly tensioned speed and that the drive pin is functioning properly.</li><li>2. Use softer blade bond to eliminate stresses which create cracks.</li><li>3. Allow blade to cut freely without bouncing.</li><li>4. Ensure blade is kept in straight line do not force around corners.</li></ol>

# Diamond Blade Troubleshooting Guide

## CAUSES

1. Using the wrong blade on a specific material. A blade specifically designed and manufactured for cutting tiles will wear out extremely fast if used on highly-abrasive material such as block.
2. Inadequate water is supplied to the blade.
3. Bad spindle bearings, worm mounting arbor, or misaligned shaft.
4. Loss of power, resulting from loose drive belts or improper voltage.

## REMEDIES

1. Avoid using general purpose specifications for cutting a single specific material. General purpose diamond blades are designed to cut a wide range of materials. Since it is unlikely an operator will be cutting an equal amount of both hard and soft materials at all times, this is not the most economical method of cutting.
2. Make sure water hoses are clean and free from any blockages. Approximately nine liters of water per minute are required to properly cool a masonry saw blade. On concrete saws, 9-22 liters per minute are required.
3. Replace defective parts.
4. See machine manual for proper belt tightening, replace worn belts, make sure proper line voltage is being supplied to the motor.

1. Blade is too hard for material being cut.
2. Blade has become dull as a result of being used on too hard a material.
3. Blade does not cut material it was specified for.
4. Insufficient power, not allowing blade to cut properly. Often, the blade will stall in the cut.

1. Select the proper blade specification for the material being cut. Consult blade recommendation chart.
2. Dress or sharpen with mortar droppings or by cutting a lightweight abrasive building block to expose diamonds. If continual dressing is required, the blade specification is too hard for the material being cut.
3. First, make sure the blade is correct according to the blade recommendation chart. If the blade is correct, allow it to dress itself on the material to be cut. If it does not dress itself, sharpen it as you would a dull blade, according to the procedure described above.
4. Tighten belts in accordance with machine maintenance instructions. Use correct voltage at motor and adequate horsepower for cutting application.

## Diamond Blade Troubleshooting Guide

### CAUSES

1. Blade collar is not properly tightened, permitting blade to either rotate or vibrate on shaft.
2. Blade collars are worn or dirty not allowing proper blade clamping.
3. Blade is not properly mounted.

### REMEDIES

1. Tighten the spindle nut with a spanner to make certain that the blade is adequately secured to prevent rotation on shaft.
2. Clean blade collars, making sure they are not worn. Tighten arbor nut properly.
3. Make certain the blade is mounted on the proper shaft diameter before tightening arbor nut. On concrete saws, make certain the pin hole slides over arbor drive pin. Never depend on the drive pin to actually drive the blade. A drive pin is simply a safety measure to prevent the blade from spinning on its spindle should the nut become loose.

1. Abrading or wearing away of the steel center faster than the diamond segment is due to highly abrasive fines generated during cutting.

1. Use as much water as possible to flush out fines generated during cutting or use blades with undercut protection. NOTE: Blades with undercut protection are not always the final answer to eliminating undercutting. There must still be taken to provide sufficient water to the steel center are immediately adjacent to the segment. This is especially important when making deep cuts.

1. Shaft bearings on masonry or concrete saws are worn, causing the blade to run eccentrically and wear out-of-round.
2. Engine is not properly tuned on concrete saws, causing surges in blade rotation.
3. Blade spindle hole is damaged from previous mistmounting.
4. Blade mounting spindle is worn. A groove may have been scoured on the mounting spindle as a result of previous blades spinning on the arbor. When a new blade is placed on such a worn spindle, it seats improperly and runs eccentrically.
5. Blade slips on arbor shaft.
6. Bond is too hard for material causing machine to 'pound' at regular intervals, wearing one half of the blade more than the other half.

1. Install new blade shaft bearings or blade shaft, as required.
2. Tune engine according to saw manufacturer's manual.
3. For large diameter blades it may be possible to rebraze segments to a new center.
4. Replace worn shaft or spindle bushing.
5. On a masonry saw, tighten the blade collar. On a concrete saw, make certain that the drive pin is functioning.
6. Use proper blade specification.

# A guide to diamond blades

## Dry cutting

1. **DO** clean the flanges before mounting the blade and check both plates are the same diameter.
2. **DO** ensure generally that the flange diameters are at least 1/3 of the diameter of the blade.
3. **DO** ensure that the arrow on the blade corresponds with the direction of rotation of the machine spindle.
4. **DO** ensure that the blade is in balance and running true. A blade which is out of balance means increased wear and even possible destruction of the saw. Ensure that the blade is concentric to within 0.15mm.
5. **DO** ensure that the machine bearings and spindle are not worn – or the blade life will be reduced.
6. **DO** use the blade with a gentle reciprocating motion – especially when cutting hard materials, and cut in the direction of the arrow.
7. **DO** avoid tilting the blade when cutting.
8. **DO** use the correct bond for material to be cut.
9. **DO** only use machines which have an approved safety guard.
10. **DO** remove the diamond blade from the machine during transit to prevent accidental damage.
11. **DO** inspect blades frequently to detect cracks or undercutting of the steel center and segments which could lead to segment loss.

**DO ALWAYS WEAR PROTECTIVE GOGGLES, INDUSTRIAL GLOVES, FACE MASKS AND THE CORRECT CLOTHES e.g. LEATHER APRONS).**

12. **DON'T** apply pressure and force your diamond blade through the cut. The weight of the machine will suffice. INCREASED PRESSURE MEANS INCREASED WEAR.
13. **DON'T** let excessive heat be generated at the cutting edge of the blade.
14. **DON'T** use your blade on metals or other unsuitable materials. If you have any doubt please contact OX Tools USA.

## Wet cutting

In addition to the recommendations for Dry Cutting please adhere to the following additional procedures for Wet Cutting.

1. **DO** ensure adequate water supply to both sides of the blade.
2. **DO** ensure that the blade cuts parallel to the wheel axis.
3. **DO** follow the manufacturer's recommended pulley sizes and operating speeds for specific blade diameters.
4. **DO** tighten drive belts to ensure full available power.
5. **DO** use drive pin if fitted to the machine.

6. **DON'T** force blade on shaft or mount blade on undersized spindle.
7. **DON'T** use paper washers to pack out the clamp plates.
8. **DON'T** force the machine so that the blade rides up out of the cut.
9. **DON'T** operate machine with damaged or open blade guard.

## Troubleshooting

### Improving your expertise

A diamond segment is like a 'living being'. Its performances at a certain time will tremendously depend on how it has been used previously. Here are some basic facts about the diamonds of the cutting edge:

Microscope view of a diamond segment's cutting edge: visible diamonds are not all 'active'. Some are just starting to appear, some are worn out.

The diamond is active and it is still intact. Its edges are well exposed and it is properly maintained in the metal bond thanks to the 'comet tail'.

In this case, the diamond is wearing out on its exposed edge. This is good as it remains aggressive.

On this picture, the exposed edges are getting rounded, which is bad because it will reduce the global cutting performance of the segment. This will happen when the diamonds are not subject to a sufficient pressure.

In the extreme case, a lack of pressure on the diamonds will lead to them polishing. At this point, the tool is not cutting anymore.

This 'broken flat' diamond is not active anymore. This is generally due to an excess of specific pressure (too low RPMs or too high feeding pressure).

Another possible effect of a too high specific pressure or of an 'unadapted tool for the job' is the 'sunked' diamonds. The diamond is simply pushed in the (too soft) bond.

# Terms and Conditions

## 1. INTERPRETATION

- (a) 'Contract' means the standard trading terms and conditions of sale (which applies to each and every Quotation and/or Order) and includes any Quotation and Order
- (b) 'OX Tools USA' means
- (c) 'Customer' means the entity to which 'OX Tools USA' enters into a Contract for the sale of Goods.
- (d) 'Goods' means the goods described in the Quotation or Order and includes replacement goods.
- (e) 'Order' means a written or verbal order from the Customer to OX Tools USA.
- (f) 'Quotation' means a written or verbal quotation provided by OX Tools USA to the Customer.

## 2. ORDERS

- (a) Orders for Goods will be binding upon OX Tools USA and the Customer. However, OX Tools USA reserves the right to accept orders in whole or in part.
- (b) Once OX Tools USA has accepted an Order, the customer may not alter or modify the Order without the prior written consent of OX Tools USA.
- (c) 15% Re-stocking fee applies to all returned products providing they are in re-saleable condition.

## 3. PRICES

- (a) All prices contained in the Quotation and/or Order will be exclusive of State taxes. All prices are in United States Dollar (USD) and subject to alteration without notice. All invoices are in United States Dollar (USD) and must be settled in United States Dollar (USD).
- (b) Any order placed with a value of under \$50.00 will not be processed. This minimum invoice value does not apply to back-orders.
- (c) Handling fee of \$19.95 will be applied to the total of every invoice, excluding back-orders
- (d) Orders with an invoice value of over \$500.00 will be shipped free in-store
- (e) Orders with an invoice value of under \$500.00 will be charged a freight charge of \$19.95 (Freight charges subject to change)

## 4. PAYMENT AND CREDIT TERMS

- (a) Unless otherwise agreed in writing, the payment due date is strictly thirty, (30) days from the end of the month in which the Goods are purchased.
- (b) Accounts with overdue balances will automatically have credit withdrawn until all outstanding balances are cleared. OX Tools USA reserves the right to charge interest at the rate of 2% on all overdue balances calculated on a daily basis from the due date until such amount is paid.
- (c) If the Customer defaults in payment of any invoice when due, the Customer will indemnify OX Tools USA from and against all OX Tools USA's costs and disbursements including a solicitor and own client basis and in addition to OX Tools USA's nominee's costs of collection.

## 5. DELIVERY OF GOODS AND RISK

- (a) Delivery of the Goods shall be made to the Customer's address. The Customer shall make all arrangements necessary to take delivery of the Goods whenever they are tendered for delivery.
- (b) The failure of OX Tools USA to deliver will not entitle the Customer to treat this Contract as cancelled.
- (c) OX Tools USA will not be liable for any loss or damage whatever due to failure by OX Tools USA to deliver the Goods (or any part of them) promptly or at all.
- (d) All risk for the Goods passes to the Customer on delivery even if OX Tools USA retains ownership.
- (e) \$500 Free Freight \$15 minimum Freight charge for orders below \$500.

## 6. RETENTION OF TITLE

- (a) All Goods remain the property of OX Tools USA until the Customer has paid for the Goods in full. If payment is made by cheque, payment will not be deemed to have been made until the cheque has been honoured.
- (b) If the Goods are on-sold by the Customer before payment

to OX Tools USA, the proceeds of sale will become property of OX Tools USA.

- (c) If the Goods are not paid for pursuant to clause 4, OX Tools USA may give notice in writing to the Customer to return the Goods or any part of them to OX Tools USA.
- (d) OX Tools USA may enter the Customer's premises without notice at any time and take possession of the Goods and without being responsible for any damage thereby caused if:
  - (i) The Customer does not pay for the Goods under clause 4;
  - (ii) The Customer fails to return the Goods upon demand;
  - (iii) A trustee in bankruptcy, Administrator, or receiver and manager is appointed over the Customer;
  - (iv) Winding-up proceedings in relation to the Customer are commencing; or
  - (v) The Customer becomes bankrupt.

## 7. CLAIMS

- (a) The Customer will inspect the Goods on delivery and will within seven (7) days of delivery notify OX Tools USA in writing of any alleged defect, shortage in quantity, errors, omissions or failure to comply with the Order or Quotation.
- (b) The Customer will afford OX Tools USA the opportunity to inspect the Goods within a reasonable time of delivery if the Customer believed the Goods are defective in any way. If the Customer fails to comply with these provisions, the Goods will be deemed to be free from any defect or damage and payment will be owing under this Contract.
- (c) If OX Tools USA agrees in writing that the Customer is entitled to reject the Goods because they are defective:
  - (i) The Goods must have a corresponding invoice number quoted;
  - (ii) Freight charges incurred for the return of the Goods being returned is at the expense of the Customer, unless otherwise agreed; and
  - (iii) OX Tools USA's liability is limited to either replacing or repairing the Goods at its discretion.
- (d) OX Tools USA does not warrant that the Goods are fit for any particular purpose or an intended use by the Customer.

## 8. LIMITATION OF LIABILITY

- (a) Subject to clause 8(b), OX Tools USA will have no liability whatsoever for any direct or indirect losses, expenses, damages and costs incurred by the Customer caused by any breach by OX Tools USA of this Contract or any negligent act or omission.
- (b) The liability of OX Tools USA to the Customer in the event of any breach of this Contract or other cause of action will not exceed the prices of the Goods.

## 9. PRIVACY ACT 1998

- (a) The Customer agrees for OX Tools USA to obtain from a credit-reporting agency and the trade referees a credit report containing personal credit information about the Customer and any additional information required by OX Tools USA.
- (b) OX Tools USA may exchange information about the Customer with those trade referees name in the application form for a trading account or named in a consumer credit report issued by reporting agency to:
  - (i) Assess the Customer's application;
  - (ii) Notify other credit providers of a default by the Customer;
  - (iii) Exchange other information with other credit providers as to the status of the trading account, if the Customer is in default with other credit providers; and
  - (iv) Assess the credit worthiness of the Customer.

## 10. GENERAL

- (a) If any provision of these terms and conditions becomes void or unenforceable, it will be severed from this agreement without affecting the enforceability of the other provision, which will continue to have full force and effect.
- (b) OX Tools USA may terminate or vary this Contract or cancel delivery of Goods at any time before the Goods are delivered by giving written notice. OX Tools USA will

not be liable for any loss or damage whatever arising from termination or cancellations.

- (c) The Customer acknowledges and agrees that the products sold to the Customer by OX Tools USA cannot be offered for sale through third party shopping websites or platforms (including but not limited to Amazon and Gumtree) without the express written authorisation of OX Tools USA.

# Warranty

OX Tools USA (OX Tools USA) warrants that all products supplied by it and purchased by you from Authorized OX Tools USA Dealers throughout United States of America are free of defects except for those products listed under Warranty Exclusions.

## Warranty Claims

If you consider that any product supplied by OX Tools USA is defective, you can lodge a claim under this Warranty and any apparent fault will be rectified free of charge by OX Tools USA or an OX Tools USA Authorized Service Dealer within the Warranty Period, which is effective from the date of purchase provided that you meet the following conditions;

- You must produce the original invoice/receipt or other proof of purchase document disclosing the purchase date.
- All costs of installation, cartage, freight, travelling expenses, hiring tools and insurance are paid by the customer.
- The product, being precision equipment, has not been misused, adjusted or serviced by any person other than an OX Tools USA Authorized Service Dealer.
- The equipment has been installed correctly and is used in accordance with the OX Tools USA instructions supplied with the product.

OX Tools USA provides this warranty in addition to all other rights and remedies that you may have under law in relation to the products to which this warranty relates.

Our goods come with guarantees that cannot be excluded under the United States of America Consumer Law. You are entitled to a replacement or refund for a major failure and for compensation for any other reasonably foreseeable loss or damage. You are also entitled to have the goods repaired or replaced if the goods fail to be of acceptable quality and the failure does not amount to a major failure.

Notwithstanding the proceeding clause, OX Tools USA's liability in respect of a breach of a consumer guarantee or any warranty made under these Conditions of Warranty for any products not of a kind ordinarily acquired for personal, domestic or household use is limited, to the extent permissible by law and at the option of OX Tools USA to:

1. Replacing the products or the supply of equivalent products;
2. The repair of the products;
3. The payment of the cost of replacing the products or of acquiring equivalent products; or
4. The payment of the cost of having the products repaired.

To the extent permitted by law, all other warranties whether implied or otherwise, not set out in these Conditions of Warranty are excluded and OX Tools USA is not liable in contract, tort (including, without limitation, negligence or breach of statutory duty) or otherwise to compensate the customer for:

1. Any increased cost or expenses;
2. Any loss of profit, revenue, business, contracts or anticipated savings;
3. Any loss or expense resulting from a claim by a third party; or
4. Any special, indirect or consequential loss or damage of any nature whatsoever.

If you wish to make a claim under this Warranty, you should:

- Contact Ph: 888 850 6710;
- Visit your nearest Authorized OX Tools USA Dealer;
- Visit OX Tools USA website for details: [www.oxtools.com](http://www.oxtools.com)

These conditions may only be varied with the written approval of the directors of OX Tools USA.

## Warranty Period

Product Type	Warranty Period
Diamond Tools	12 Months
Hand Tools	12 Months
Access Equipment	12 Months
Safety Equipment	12 Months
Construction Machinery	12 Months

## Warranty Exclusions

This section identifies what is excluded under this Warranty.

This Warranty does not cover damage caused by:

- Misusing, overloading or abusing the OX product,
- Operating the product in a manner that is not in accordance with the OX Tools USA instructions supplied with the product (the "Instruction Manual"),
- Failing to clean the product in accordance with the instructions for correct and regular cleaning as set out in the Instruction Manual,
- Not carrying out periodic maintenance,
- Neglecting or otherwise failing to maintain the product in accordance with the instructions for maintenance of the product including regular tune-ups, lubrication etc...,
- Using incorrect voltage or non-authorized electrical connections with the product,
- Installing the product incorrectly,
- Using non authorized/non-standard parts, non-genuine OX Tools USA parts in connection with the product,
- Repairing or carrying out any work on the product by someone other than an Authorized OX Tools USA Service Dealer,
- Causing a double burnout - field and armature burnout,
- Operating the product with any guard, shield or line cutting knife removed, repositioned, or that is incomplete or damaged,
- Using or operating the product with any evidence of partial failure of product or damage being present,
- Tampering with the product in any way other than in accordance with the manual,
- Not having taken reasonable steps to prevent the damage or failure from occurring to the product,
- Storing the product inconsistently with manufacturer's recommendations or where the product is exposed to corrosive substances such as fertilisers, grass and plant residue including palm tree sap, bore water and other detrimental environmental exposure,
- Making mechanical adjustments that are inconsistent with the Manual- including, chains, bars, engine tuning etc...,
- Operating the product with incorrect fuel to oil ratio,
- Having made improper adjustments of ignition timing or the carburettor,
- Using the product with clogged or removed filters (i.e. fuel filter, oil filter, air filter),
- Using incorrect chain and bar oil/lubricant for the oil pump

In addition to the above, this Warranty DOES NOT cover the following:

- Products purchased:
  - Outside of United States of America,
  - from a non - Authorized OX Tools USA Dealer (such as purchases from unauthorized retailers and purchases over the internet, from local/ international sellers or sites such as Ebay),
  - at an auction, or

- from a private seller.
- Accidental damage or damage caused by an extra ordinary event or circumstance beyond your or anyone else's control including damage caused by:
  - environmental factors,
  - natural discolouration of material due to ultraviolet light,
  - crushing, impact with hard surface or damage caused in the transit of the product, foreign material, or exposure of the product to excessive heat or cold or to solvents, or water entry into the product,
  - abnormal product performance caused by any ancillary equipment interference or other external factors,
- Damage or failure that occurs for a reason or reasons that were already disclosed to you (in writing or otherwise), prior to your purchase of the product,
- Damage or defects to the product that ought reasonably to have been revealed to you by an examination of the product, where you conducted such an examination before acquiring the product,
- Normal wear and tear due to the course of normal use,
- Freight costs associated transporting the product between you, the place of purchase, the Authorized OX Tools USA Dealer and OX Tools USA for the purposes of making a claim pursuant to this Warranty or otherwise,
- Repairs that are required by you to be made to the product which are simply due to a clogged or restricted exhaust system, carbon deposits in exhaust ports, piston crown or combustion chamber or periodic decarbonizing,
- Products with serial number altered or removed,
- Refurbished, ex display or factory second products,
- Consumable items supplied with the product or that are a part of the product,
- Service parts,
- Accessories, that for the avoidance of doubt include but are not limited to the following:  
those included with the product at the time the product was purchased by you including cases & site bags, brushes, chucks, cord sets, bulbs, LED's & lamps, driver & drill bits, blades, driver blades, o-rings, switches & triggers, power tool attachments, blades and cutters, spark plugs, carburettor kits, filters, bars & chains, cutting equipment, recoil springs, rope, belts, measuring devices, air (pneumatic) fittings, nose caps, gaskets, fuel hoses,
- The product coming into contact with sand, water, rust, corrosion, fire, vermin and insect infestation, power outages or surges or inadequate voltage or current.

If the product you are using has been rented or leased by you, and you consider a claim might be made under this Warranty, you should refer the matter to the rental or leasing company immediately and they will handle the matter.

This Warranty does not cover service costs in replacing and maintaining consumable parts and accessories that have ceased working through normal wear and tear such as, but not limited to: drill heads, blades, cutters and other parts classifiable as a consumable part or accessory.

## Safety

Safety is not something that is taken lightly at OX. When we design and build our tools the safety of the operator and safety of the tool is always the most important factor that is well thought-out during the whole process.

Safety when using OX tools is of paramount importance. Ultimately safety comes down to the operator which is why instructions need to be read and adhered to. It is also important to ensure the correct safety clothing is worn whilst working on a construction site.

## Environmental

OX Tools is committed to managing environmental impact as an integral part of our operations. In particular, it is our policy to assure the environmental integrity of our processes and facilities at all times. We will do so by adhering to the following principles:

We employ management systems and procedures specifically designed to minimize the use of hazardous materials, energy and other natural resources, to minimize the generation of waste and to enable recycling and reuse of materials.

We continually seek opportunities to improve our environmental performance by establishing objectives and targets, measuring progress, and reporting our results; including but not limited to energy, water, paper and fuel consumption and vehicle miles travelled.

We promote participation and communicate our commitment to responsible environmental management by promoting environmental responsibility among our employees; by providing the necessary training and support to enable them to implement this policy; by informing suppliers of our environmental policy and encouraging them to adopt effective environmental management practices; and by soliciting input from our employees, suppliers, customers and board members in meeting our environmental goals.
